TECHNICAL SKILLS & ACTIVITIES

Languages: Python, Javascript, Typescript, HTML/CSS, C, Scala, SQL, Bash, Java

Frameworks & Libraries: React, React Native, Next.js, Node.js, Express.js, FastAPI, PyTorch, Springboot

Tools: Git, Docker, Google Cloud, AWS, Firebase, Postman, Jupyter, Unix/Linux, Kubernetes

Databases: PostgreSQL, MongoDB, MySQL, DynamoDB

PROFESSIONAL EXPERIENCES

Software Engineer

Jun 2025-Present

Mutual of Omaha

Remote

- Architected a serverless backend (**AWS Lambda, AppSync GraphQL, DynamoDB**) for Health e-application
- Refactored backend microservices supporting 4.2M+ users, migrated **Java Spring Boot** services to **TKG Kubernetes** to improve reliability and horizontal scalability
- Owned an internal survey application end-to-end (**React, TypeScript, AWS ECS**) from redesign through production, now used by 100+ internal teams
- Built a Recurring Payments integration used by 27,000+ pilot users, using **Apache Kafka** for high-throughput batch processing

Software Engineer Intern

Jun 2024-Aug 2024

BNY Mellon

Pittsburgh, PA

- Built backend REST API services and frontend features for ElizaAi, an internal AI chatbot used for real-time employee support, using **Python, Langchain, Docker, and PostgreSQL**
- Improved chat AI answer accuracy and relevancy by from 56% to 77% (+21%)
- Deployed the project to production on **Google Cloud (GCP AppEngine)**, where it now supports **50,000+** employees across 2000+ internal teams
- Collaborated in daily code reviews and backend architecture discussions and collaborated with 3 engineers

PROJECT EXPERIENCE

SoleSync (solesync-app.vercel.app) | *Nextjs, MongoDB, AWS Lambda, AWS SQS, FastApi*

- Built and owned an end-to-end SaaS platform, from zero to production, adopted by of the largest sneaker resale businesses in the US
- Designed a distributed, event-driven job-processing system (**AWS SQS triggered AWS Lambda**) handling pricing updates at scale, with full ownership of architecture and deployment
- Grew the platform to 7,500+ sales and **\$1.2M+** GMV in 11 months

Recall - Find Gamer Friends (App Store) | *React Native, MongoDB, Redis, AWS, S3, EC2/Linux, Redux*

- Deployed a mobile full-stacked social media app, allows gamers to find gaming buddies and lobbies
- Implemented **WebSocket** real-time communication for live lobby updates, friend requests, and user interactions, using **Redis** to manage shared application state
- Launched on the Apple app store with >3000 downloads, 50+ daily active users, and 4.9+ stars ratings

Twitter/X Algorithm from Scratch | *Python, PyTorch, FastAPI, PostgreSQL*

- Recreated X's For-you-feed ranking logic using engagement weights and simulated user behavior
- Implemented a recommendation pipeline covering candidate retrieval, filtering, scoring, and ranking

EDUCATION

University at Buffalo

Fall 2025

Bachelor of Science in Computer Science

- **Awards:** Dean's Honors List, John and Katherine Simpson Scholarship
